📌 Objective

To analyze how trading profitability and behavior change based on market moods like **Fear**, **Greed**, **Extreme Fear**, etc., and identify actionable insights that can influence smarter trading strategies.

🧠 Key Findings

- Traders made **better profits during Greed and Extreme Greed**.
- Average losses increased during **Fear and Extreme Fear**.
- Emotional market phases significantly impact trading performance.

📊 Tools Used

- Google Colab (Python)
- pandas, matplotlib
- Real sentiment & trading datasets
